

INTEGRATED MANAGEMENT SYSTEM POLICY

The mission of MOHU BUDAPEST cPlc. is to provide quality services for the collection, transport and pre-treatment of solid waste generated in the scope of public services and institutional sub-tasks, as well as the optimal performance of waste treatment, recovery (material recovery and energy recovery), disposal (landfilling) and facility management tasks, based on the principles of a circular economy.

Our aim is that, as a result of our social attitudes and behaviours, we see materials treated as waste as a value, taking responsibility for preventing environmental pollution, achieving carbon neutrality and thereby helping to curb climate change, in order to reduce the consequences of our environmental impact.

We have made commitments to ensure the availability of all the resources needed to achieve our goals.

We are committed to customer focus, safe working conditions, energy management performance, protection of the environment, sustainability, information security and continuous improvement of our integrated management system.

We strive to use new and innovative technology, to procure environmentally friendly and energy-efficient products and services, to conserve our environmental resources, to create safe working conditions and to regularly improve our processes.

We pay particular attention to the professional development and awareness of staff, ensuring continuous communication, compliance with legal and other requirements, identifying, analysing and mitigating risks to acceptable levels, while applying a process approach.

We ensure and guarantee the high quality and reliability of our activities by selecting the right suppliers and business partners and by building long-term partnerships that benefit all stakeholders.

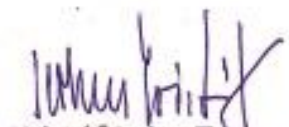

The integrated management policy of MOHU BUDAPEST cPlc., reflecting the principles and values adopted by the management, is in line with the strategic objectives.

To achieve our mission and objectives, we operate an integrated management system in line with current standards.
